

**TRUSTINSOFT SELECTED AS FINALIST FOR RSA[®] CONFERENCE INNOVATION
SANDBOX CONTEST 2015**

TrustInSoft Recognized For Eradicating Software Security Flaws

BEDFORD, MA – MARCH 24, 2015 – TrustInSoft today has been named one of 10 finalists for RSA[®] Conference Innovation Sandbox Contest 2015, which is celebrating its 10-year anniversary this year. On Monday, April 20, 2015, TrustInSoft will have the opportunity to showcase its innovative information security technology to the Innovation Sandbox Contest panel of judges for a chance to be named “Most Innovative Company at RSA Conference 2015.”

Innovation Sandbox Contest promotes new approaches to information security technology, provides advice and counsel for entrepreneurs, and exposes the RSA Conference community to venture capitalists, industry experts, senior level business practitioners and thought leaders.

“Success awaits those that are named to the top 10 finalists for RSA Conference Innovation Sandbox Contest,” said Sandra Toms, vice president and curator for RSA Conferences. “Year after year, finalists have gained visibility and validation within the information security industry that has catapulted them to new heights. Many past winners and finalists have experienced high growth and increased funding, and we expect the same with this year’s top 10.”

Currently, companies try to increase their cyber protection by adding more and more layers of security onto their software. Since none of these layers is *guaranteed* secure, though, hackers are still able to exploit vulnerabilities in even the smallest software flaws.

TrustInSoft is putting an end to this game of cat-and-mouse by changing the way software security works: by providing tools and services able to mathematically *guarantee* that software is immune to entire families of known flaws. Now, TrustInSoft’s customers—spanning industries including aeronautics, space, defense, energy, telecommunication, Internet of Things, and IT—are able to deploy their software with an unparalleled level of confidence and trust. TrustInSoft can guarantee immunity against even the most insidious known flaws: for example, buffer overflows indicating Heartbleed-like attacks, or hidden flaws known as zero-days. No other company is able to provide this level of trust in existing software.

“As a finalist for the 2015 Innovation Sandbox Contest, we have the unique opportunity to demonstrate to a worldwide audience how our innovative source code analyzer not only reduces cyber-threats, but also cuts validation and verification costs,” said TrustInSoft CEO Fabrice Derepas. “This incredible opportunity should really help to catapult our US growth.”

The “Most Innovative Company at RSA Conference 2015” winner will be determined at the conclusion of Innovation Sandbox Contest, after each finalist gives a short presentation to a panel of judges that includes Asheem Chandna, partner at Greylock Partners; Gerhard Eschelbeck, vice president of security engineering at Google; Renee Guttman, vice president for information risk at Accuvant; Patrick Heim, head of trust and security at DropBox; and Paul Kocher, president of Cryptography Research.

About TrustInSoft

TrustInSoft is a French startup company located in Paris, incorporated in 2013.

TrustInSoft produces TrustInSoft Analyzer, an advanced static source code analyzer, based on the open source Frama-C platform. TrustInSoft Analyzer enables software developers and integrators to exhaustively detect the most frequent and dangerous families of threats before deployment: this unique feature has been recognized by NIST, officially setting TrustInSoft apart from other software analysis companies. TrustInSoft also offers professional services and expertise to formally audit safety and security-critical existing software components.
